

Café de Paris

Application Process Flow

End-to-end process map for POS, kitchen, bakery, central stores, inventory, fiscalization, reporting, and client apps.

Stack: Django + DRF · Web UI · Desktop POS · Android Kitchen/POS

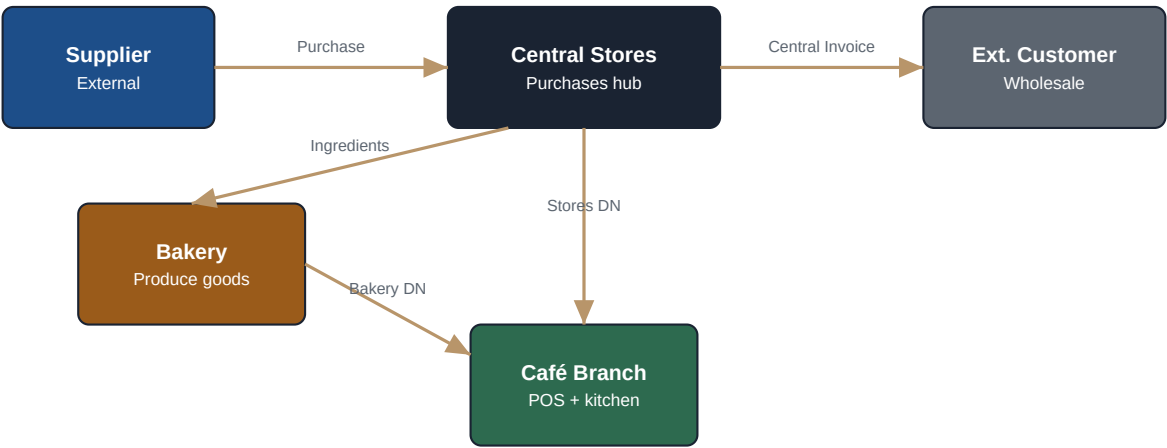

Timezone: Africa/Harare · Tax: inclusive (default 15.5%) · Fiscal: ZIMRA

Generated from the café_de_paris codebase for operations and onboarding.

1. System overview

Café de Paris is a multi-branch restaurant and bakery operations platform. Central Stores purchases goods; the Bakery produces finished products; café Branches sell via POS; HQ oversees users, fiscal rules, and network stock.

Stock network

Master flows: (1) Buy → Stores · (2) Produce at Bakery · (3) Deliver to Café · (4) Sell at POS · (5) Fiscalise · (6) Day-end · (7) Wholesale Central Invoice.

2. Modules (Django apps)

Module	Responsibility
accounts	Staff roles, branch access, login (web / desktop / kitchen / mobile)
branches	Branches, dining tables, fiscal day open/close
catalog	Categories, products, menu add-ons, POS stations
customers	Customers, prepaid accounts, family/staff pricing
inventory	Branch stock, movements, transfers, delivery notes, central invoices, stock take
purchasing	Suppliers, purchases into Central Stores, statements
orders	POS orders, payments, kitchen status, expenses, day-end closes
payments	Currencies and exchange rates
zimra_fiscal	Proforma → ZIMRA fiscal receipt submit
bakery	Recipes (BOM), production orders, costing
reports	Sales, day-end, VAT, ingredients, customer balances
sync	Desktop offline pull/push (idempotent client orders)
ui	Web management console and print templates

Clients: **desktop/** Electron offline POS · **android-kitchen/** kitchen display + cashier POS (Bluetooth ESC/POS).

3. Branch types

Type	Code	Role
Headquarters	hq	Oversight; users; network visibility; admin
Branch (café)	branch	POS, kitchen, GRV receive, stock take, expenses
Bakery	bakery	Production from recipes; outbound bakery delivery notes
Central Stores	stores	Purchases; hold stock; stores transfers; central invoices

4. Roles & access

Role	Typical use
HQ Admin	All branches; users; suppliers; approve POs & fiscal
Branch Manager	Own branch ops; dining tables; approve fiscal; no HQ dashboard
Cashier	POS + payment; stock take; fiscal print if enabled
Waiter	POS order entry only (no payment); no management console
Baker	Bakery production / bakery transfer path
Staff	GRV receive (branch / HQ / stores) when configured

Landing after login: Waiter/Cashier → POS · GRV staff → GRV · Branch manager → POS or Orders · else → Dashboard.

5. POS, kitchen & payment

5.1 Place order

- Modes: **Order** (place) or **Receipt** (pay).
- Optional customer, dine-in table, or takeaway.
- Order status = open; kitchen status = pending.
- Clients: web POS, desktop Electron, Android POS.

5.2 Kitchen preparation

Station filter (bar / kitchen) via staff kitchen_station vs category pos_station. Adding items to an open order resets kitchen to pending.

5.3 Collect payment

- Waiters cannot collect payment.
- Tenders: cash / bank / EcoCash / multi-currency split, or customer account.
- Receipt number format: {BRANCH_CODE}{DDMMYY}{daily#}.
- Cancel open unpaid (no stock). Void paid non-fiscalized (restock). Fiscalised approved cannot void.

6. Fiscalization (ZIMRA)

Non-fiscal branch

Fiscal branch

- Close fiscal day via branch fiscal-day API.
- VAT report includes only fiscalised (approved) sales — pending proforma excluded.
- Screens: Invoices, Receipts, POS print templates.

7. Bakery production

- Consumes ingredients (PRODUCTION_CONSUME); adds finished goods (PRODUCTION_OUTPUT) at bakery.
- Only central bakery branch; finished bakery-transfer products only.
- Finished goods leave bakery via Bakery Delivery Notes (not Central Invoice).

8. Purchases, transfers & GRV

8.1 Purchases into Central Stores

Create is immediate receive (status RECEIVED). HQ/global approve path exists for legacy draft POs. Supplier statements available under Reports.

8.2 Bakery delivery note

On create: DELIVERY_OUT at bakery. On approve: DELIVERY_IN at destination and status DELIVERED (no separate dispatch step for bakery notes).

8.3 Stores delivery note / transfer invoice

Optional mark transfer invoice paid. Print delivery note or transfer invoice. GRV screen used by branch/HQ/stores staff; global users use transfer pages.

8.4 Central Invoice (wholesale)

Number CI{STORES_CODE}{id}. Cancel restocks via CENTRAL_INVOICE_CANCEL. This sells to external customers — not inter-branch transfer.

9. Inventory & stock take

Source of truth: **BranchInventory** (qty per branch × product) + append-only **StockMovement** ledger.

Reason	Triggered by
PURCHASE	Purchase create / receive
PRODUCTION_CONSUME / OUTPUT	Bakery production complete
DELIVERY_OUT / IN / CANCEL	Delivery notes
TRANSFER_OUT / IN	Legacy StockTransfer
SALE / SALE_VOID	Order pay / void
CENTRAL_INVOICE / CANCEL	Central invoice
STOCK_TAKE	Complete stock take
MANUAL_ADD / SET / ADJUSTMENT	Inventory adjust API

Sale stock rules

- Bakery sellable SKU on order → deduct finished product at selling branch.
- Kitchen product with recipe → deduct Branch Ingredients × recipe qty.
- No recipe → no stock deduction.
- POS may go negative if branch allow_negative_stock; transfers/production always require stock.

Stock take → day end

10. Day end & reports

Day-end cash-up

Expected till $\approx$ sales + deposits – expenses. Expenses logged from POS/expenses API and included in day end.

Report suite

Report	Purpose
Ingredient Stock	On-hand ingredients by branch
Ingredient Usage	Consumption over a period
Day End	Cash-up, variance, activity
Customer Balances	Prepaid account balances
VAT	Fiscalised sales VAT
Supplier Statements	Supplier spend over period
Summary / Profit / CSV	Management analytics APIs

11. Customers & accounts

- Company-wide customers; types Regular / Family / Staff (cost-based pricing where configured).
- Deposit cash → account balance; pay order with payment_method=account.
- Cashier Customer Payment screen; printable statements.

12. Client applications

Android kitchen / POS

Desktop offline POS

Sync: GET /api/sync/ping[pull] · POST /api/sync/push/ · SyncedClientOrder UUID idempotency. Fiscal day remains online-only for managers.

13. Main screens (web console)

Screen	Path	Who
Dashboard	/	HQ / global
Point of Sale	/pos/	POS roles
Kitchen	/kitchen/	Kitchen access
Orders / Invoices / Receipts	/orders/ ...	Management / fiscal cashiers
Stock Take / Adjust	/stock-take/ ...	Management / cashier
GRV	/grv/	Receive roles
Bakery Production / Transfers	/bakery-production/ ...	Bakery access
Stores Transfers / Central Invoice	/stores-transfers/ ...	Stores / HQ
Purchases / Recipes / Catalog	/purchase-orders/ ...	Capability gated
Reports / Users / Payment rates	/reports/ ...	Role gated

14. End-to-end master flows

A. Supply chain into café

B. Bakery finished goods path

C. Fiscal café trading day

D. Wholesale

Quick reference — one-liners

- **Buy raw goods:** Supplier → Purchase at Stores → BranchInventory (stores).
- **Feed bakery:** Ingredients at bakery → Production → Finished bakery stock.
- **Supply café:** Bakery DN and/or Stores DN → Café inventory → POS sale (recipe or finished SKU).
- **Fiscalise:** Pay → proforma → manager approve → ZIMRA → fiscal receipt.
- **Wholesale:** Central Invoice → external customer → stock out.
- **Cash control:** Sales + deposits – expenses → DayEndClose (after daily stock take).
