

Café de Paris

User Guide

Practical how-to guide for staff using the Management Console, Point of Sale, kitchen display, bakery, stores, and reports.

Language: English · Audience: Cashiers, waiters, managers, bakery & stores staff, HQ

Timezone: Africa/Harare · Fiscal: ZIMRA (where enabled)

Menus you see depend on your role and branch type. If a screen is missing, ask your manager to check your user permissions.

Contents

1. Getting started
2. Roles & what you can do
3. Point of Sale (cashiers & waiters)
4. Kitchen display
5. Orders, invoices & fiscal receipts
6. Stock take, adjustments & wastage
7. Transfers & GRV (goods received)
8. Bakery production & recipes
9. Purchases, suppliers & central invoices
10. Customers & account payments
11. Expenses & day end
12. Products & catalogue
13. Users, branches & audit log
14. Reports & payment rates
15. Quick troubleshooting

1. Getting started

1.1 Sign in

Open the Café de Paris Management Console in your browser (or the desktop / tablet POS app).

- 1 Enter your **username and password**, or your unique **4-digit access code**.
- 2 Choose a language from the selector if needed (this guide is English).
- 3 You land on the home screen for your role (often Point of Sale, Bakery Production, GRV, or Dashboard).

Tip: Keep your access code private. Managers use codes to approve restricted actions.

1.2 The console layout

- **Sidebar** — main menu (items appear based on your role).
- **Top bar** — page title, language, your username, Log out.
- **Main area** — forms, lists, POS cart, reports.

1.3 Branch types (how the business is organised)

Type	What it does
Headquarters (HQ)	Oversight, users, multi-branch reports, configuration
Branch (café)	POS sales, kitchen, stock take, receive deliveries, expenses
Bakery	Produce finished goods from recipes; send bakery transfers
Central Stores	Buy stock from suppliers; send stores transfers; wholesale invoices

2. Roles & what you can do

Role	Typical daily work
HQ Admin	Dashboard, all branches, users, suppliers, fiscal overview, reports
Branch Manager	Run the café: POS, orders, stock, transfers, tables, approve fiscal
Cashier	Take orders, collect payment, stock take, customer payments, day end
Waiter	Enter orders only (no payment / receipt / day end)
Baker	Bakery production sheets and bakery transfers
Staff	Receive goods on the GRV screen

Branch managers and HQ usually do not need an access code for order cancels; cashiers and waiters may be prompted for a manager code.

3. Point of Sale (cashiers & waiters)

Open **Point of Sale** from the sidebar. Cashiers see two modes; waiters see Order only.

3.1 Place an order (Order mode)

- 1 Confirm the correct **Branch**.
- 2 Choose **Takeaway** or **Dine In**. For dine-in, pick a **Table**.
- 3 Optionally select a **Customer** (or leave Walk-in).
- 4 Search or tap categories to add products. Add any required **add-ons**.
- 5 Review the cart totals (tax / levy included where configured).
- 6 Submit the order. Print an **order slip** for the kitchen if needed.

Tip: Waiters stop here. The kitchen board updates when the order is placed.

3.2 Collect payment (Receipt mode)

- 1 Switch to **Receipt** mode.
- 2 Select an open or unpaid order from the list.
- 3 Choose tender: cash, bank, EcoCash, split currencies, or **customer account**.
- 4 Confirm payment. A receipt number is assigned.
- 5 Print the receipt when prompted.
 - Stock is deducted when the order is paid (finished bakery items or recipe ingredients).
 - You can cancel open unpaid orders (no stock impact). Voiding paid sales may need a manager and is blocked after fiscal approval.

3.3 POS shortcuts (top bar)

Button	Use it to
Fiscal day	Open or close the fiscal day (managers, fiscal branches)
Stock take	Jump to stock take before day end
Customer payment	Record a deposit onto a customer account
Add expense	Log a branch expense against the till
Day end	Cash up and close the trading day

4. Kitchen display

- 1 Open **Kitchen** from the sidebar.
- 2 Filter by station (bar / kitchen) if your account is station-scoped.
- 3 New tickets appear as pending. Move them: **Preparing** → **Ready**.
- 4 Paid orders leave the board when complete.

Tip: Adding items to an open order can send the ticket back to pending so nothing is missed.

5. Orders, invoices & fiscal receipts

5.1 Orders

Use **Orders** to search recent sales (about the last month). Filter by All / Open / Unpaid / Paid / Cancelled. Search by order number, branch, receipt number, or staff.

5.2 Invoices

Invoices lists POS receipts and transfer invoices. Print copies and mark transfer invoices as paid when applicable.

5.3 Fiscal branches (ZIMRA)

- **Proforma** — paid sales waiting for fiscal approval (today's fiscal snapshot).
- **Fiscalise** — issued fiscal receipts after a manager approves and submits to ZIMRA.
- Open the **fiscal day** before trading; close it when the day is finished.
- VAT reports only include fiscalised (approved) sales — pending proformas are excluded.

Non-fiscal branches: pay → receipt number → print thermal receipt. No Proforma / Fiscalise steps.

6. Stock take, adjustments & wastage

6.1 Stock take

- 1 Open **Stock Take**.
- 2 Create or continue a **daily** take (shop stock + branch ingredients) or a **monthly** take (ingredients + assets).
- 3 Enter counted quantities (or import CSV where available).
- 4 Complete the take so variances are posted to stock.

Tip: Day end often requires a completed daily stock take first. If day end is blocked, finish stock take and try again.

6.2 Stock adjustment

Managers use **Stock adjustment** to increase or decrease quantities by item type when a count correction or write-up is needed outside a full take.

6.3 Wastage

- Record disposal of damaged or expired goods.
- Options may include bakery reuse or kitchen transfer, depending on branch setup.
- Always record wastage promptly so reports and costing stay accurate.

7. Transfers & GRV (goods received)

Stock moves between Central Stores, Bakery, and café Branches using transfer documents. Receiving locations confirm goods on **GRV** or Branch Transfers.

7.1 Types of transfers

Screen	Direction
Bakery Transfers	Bakery → stores or café branches
Stores Transfers	Central Stores → branches or bakery
Branch Transfers	Branch ↔ branch (send and receive)

7.2 How to receive (GRV)

- 1 Open **GRV** (or Branch Transfers for cashiers receiving branch-to-branch stock).
- 2 Find the pending delivery note.
- 3 Confirm quantities received. Flag damaged lines when needed.
- 4 Complete receive so stock is credited to your branch.

Tip: Cashiers typically receive branch transfers on Branch Transfers, not the full GRV console.

8. Bakery production & recipes

8.1 Recipes

Under **Recipes**, maintain the bill of materials (ingredients per finished product). Review recipe cost versus selling price and margin before production.

8.2 Bakery production

- 1 Open **Bakery Production**.
- 2 Select the production date and destination sheet as required.
- 3 Enter quantities to produce. Check that ingredient stock is sufficient.
- 4 Complete the sheet — ingredients are consumed and finished goods are added to bakery stock.
- 5 Send finished goods out with **Bakery Transfers** (delivery notes).

9. Purchases, suppliers & central invoices

9.1 Suppliers & Purchases

- 1 Maintain suppliers under **List Suppliers** (HQ).
- 2 Open **Purchases** to record a purchase into Central Stores (raw materials or POS products).
- 3 Add lines and quantities, then save — stock increases at stores when received.

9.2 Central Invoice (wholesale)

Use **Central Invoice** when Central Stores sells bakery/store goods to an **external customer** (not an inter-branch transfer). Print the invoice and mark it paid when payment is received. Cancelling restocks the stores.

10. Customers & account payments

10.1 Customer list

- Add or edit customers under **List Customer**.
- Types: **Regular**, **Family**, **Staff** (staff may use cost pricing where configured).
- Set credit limits and loyalty fields as your policy requires.
- Import / export CSV when available for bulk updates.

10.2 Customer accounts

- 1 Open **Customer Accounts** (or **Customer Payment** from POS / sidebar for cashiers).
- 2 Select the customer and record a payment / deposit.
- 3 At POS, charge an order to the account when the customer has enough balance / credit.
- 4 Print statements from the accounts screen when customers request them.

Tip: HQ can adjust balances when correcting errors; use audit trail for accountability.

11. Expenses & day end

11.1 Expenses

Record branch expenses from **Expenses** or the POS **Add expense** button. Include currency and optional supplier. Expenses reduce expected till at day end.

11.2 Day end (cash-up)

- 1 Complete the **daily stock take** if required.
- 2 From POS, open **Day end**.
- 3 Review sales, customer deposits, and expenses for the day.
- 4 Count the till per currency and enter actual amounts.
- 5 Save the day-end close and print the day-end report.

Expected till $\approx$ sales + customer deposits – expenses. Investigate large variances before closing.

11.3 Understanding variance

When you count the till at day end, the system compares what you **counted** with what it **expected** to be in the drawer. The difference is called **variance**.

Variance = Counted – Net expected

Net expected = sales collected + customer deposits – expenses paid from the till (per currency).

Variance	Meaning	Typical causes
Positive (+)	You counted more cash than expected (surplus / overage).	Unrecorded cash, counting error, float not accounted for.
Negative (–)	You counted less cash than expected (shortage).	Unlogged expense, wrong change, missing sale, counting mistake.
Zero	Counted matches expected — till balances.	—
— (dash)	No counted amount was entered when day end was saved.	Re-run day end and enter till counts.

Tip: Aim for variance as close to zero as possible. Repeated or large variances usually mean counting errors, unrecorded expenses, or payment/recording issues worth investigating.

12. Products & catalogue

Screen	Purpose
List Products	Made-to-order menu items: price, category, branch availability, POS station
Menu Add-ons	Groups (choose one / any) and options shown on POS

Screen	Purpose
List Ingredients	Raw materials tracked in inventory and recipes
Product Categories	Grouping, POS visibility, asset flags
Bakery Products	Finished bakery goods for production and transfer

Tip: If a product does not appear on POS, check category visibility, branch availability, and that the item is active.

13. Users, branches & audit log

13.1 Users

HQ (and authorised managers) use **Users** to create staff accounts: username, password, 4-digit access code, role, home branch, POS access, and kitchen station.

13.2 Branches

Configure sites under **Branches** (HQ / Branch / Bakery / Central Stores). Branch codes appear on receipt numbers. Enable fiscalization per branch. Managers/HQ can maintain dining tables for dine-in POS.

13.3 Audit log

The **Audit log** records sensitive actions (updates, deletes, cancels, voids). Filter by date, branch, action, and entity when investigating discrepancies.

14. Reports & payment rates

Report	When to use it
Ingredient Stock	See on-hand ingredients by branch
Ingredient Usage	Track consumption over a date range
Day End	Review past cash-up closes, variance by branch, and period totals (orders, gross, expenses)
Sales by Product	Best sellers and product performance
Voided & Cancelled	Monitor voids and cancellations
Customer Balances	Account balances across customers
VAT Report	Fiscalised sales VAT (fiscal branches)
Supplier Statements	Supplier spend over a period
Dashboard (HQ)	Sales, profit charts, CSV export

Payment & Rates

- **Currency** — maintain currencies used at POS and expenses.
- **Rates** — keep exchange rates up to date for multi-currency tenders.
- Currency create/edit may be limited to a designated global administrator.

15. Quick troubleshooting

Problem	What to try
Menu item missing	Check role permissions and branch type; ask HQ to review Users
Cannot pay / no Receipt mode	Waiter accounts cannot collect payment — use a cashier or manager
Day end blocked	Complete today's daily stock take, then reopen Day end
Large day-end variance	Check unlogged expenses, change given, and recount the till; see section 11.3
Product missing on POS	Check category, branch availability, and active status
Cannot void a sale	Fiscalised approved receipts cannot be voided; ask manager
Transfer not in stock	Confirm GRV / receive was completed at the destination
Fiscal submit fails	Ensure fiscal day is open; check network and ask manager to re-approve
Wrong language	Use the language selector on the login page or top bar

Printables you may see

- Order slips (kitchen) · Customer receipts · Transfer / delivery notes
- Central invoices · Customer statements · Supplier statements · Day-end close printout
